

DATE/VERSION NO:

The purpose of the proposal is to provide the reviewers with sufficient information about your proposed study. The review panel are interested in the practical aspects of your study, such as how many participants will be recruited, where they are recruited from, exactly what they are expected to do, and what are the potential risks to both participants and researchers, etc. Clearly there will be disciplinary difference in the way in which a research proposal is constructed. However, the headings below are an indicative list you may wish to consider. The proposal must cover the information provided in and aligned with your WorkTribe application.

NAME RESEARCH PROPOSAL

Title of project:	
Name of researcher:	

Background: Short summary of the background or rationale for your proposed study in around one paragraph.

Research aims and objectives:

Research question(s):

Study design:

Sample details: Who or what is the sample population?

Sample size: State your intended sample size and rationale for choosing this sample size. Include statistical power calculations, if appropriate.

Sampling method:

--

Recruitment method:

--

Data collection tool:

--

Analysis: Proposed statistical methods, tests or qualitative methods to be employed

--

Ethical issues: Including risks to study participants and researchers

--

Human Tissue issues: Are there any Human Tissue Act considerations that you should review?

Drug or products formulation details:
